

Create a Basic Web Page

Using Bootstrap (<https://getbootstrap.com/>) you are to create a form that looks like the screenshot. I expect you to read through the bootstrap documentation to see what you need to do to create this form.

Specifications:

1. Must be as accessible as possible based upon the lesson notes.
2. Must have all required attributes.
3. The method will be "post" the action will be a hash "#"
4. Can only use CSS styles provided by Bootstrap. No additional CSS should be provided or used.
5. For the states you will only list 5 states with Michigan being the third one on the list but the first to be selected.
6. No JavaScript is to be used.
7. Note, class of "container" is used to center and adjust width of webpage. To accomplish this surround the form element in a div with that class (<div class ="container">). Also, the title element value will be "Form Project".
